hungrybear

Provided by the Hungry Bear Team

Our Vision

Presentation

Hungry Bear is a deflationary, fully audited and community-driven BEP-20 token built on the Binance Smart Chain (BSC). It was launched on April 12th 2021. Two functions occur during each trade: Reflection and Burn.

According to the UN, 25,000 people die each day from hunger or related causes. Hungry bear has for noble mission to solve this issue as well as helping in the conservation of endangered species.

Providing relief for the economically disadvantaged benefits humanity in many more ways. With this primary need already fulfilled, people would be able to focus on growing and leading a worthy life.

The philanthropic aspect of Hungry Bear is a founding pillar as to why we started this cryptocurrency project. As such, charity donations will be made on a regular basis to different organizations with a similar vision.

Doing so can only be made possible by remaining a tight-knit community that is looking to make a difference and sees long-term, by establishing essential and strategic partnerships as well as demonstrating full transparency over our actions.

Transparency

KEEPING OUR HOLDERS UPDATED

Transparency at Hungry Bear is paramount, especially in the BSC environment, where very few projects emphasize on this principle. We therefore strive to provide confidence for our holders and future investors through an efficient horizontal communication with nothing left to chance.

HUNGRY BEAR PROTOCOL

During each trade, two simple functions occur: a reflection and a burn. In each trade, the transaction is taxed a 8% fee, which is split in two ways:

- 5% burnt to the 0x000000000000000000000000000000000000dead wallet.

- 3% is redistributed to all existing holders.

What it means for our holders

The redistribution amount depends upon the volume of the token being traded. This is done with the aim to prevent a downwards sell pressure that could be caused by early buyers who have gotten a higher return on investment.
This mechanism also encourages holders to keep their tokens in their wallet by providing a reward amount dependant on the total tokens held by the wallet owner.

MARKETING AND CHARITY WALLETS

Functioning Principle

1% of the token supply has been allocated for Marketing as well as holding charities. Marketing is essential for the project as it allows us to raise awareness to bring in more holders, to grow and ultimately deliver on our main mission.
The budget is tightly controlled and the funds release takes into account 3 variables:

- The 3% reflection of all the trades
- The Trading volume
- $HUNGRY's price

Spending

As more trading volume occurs and the price is healthily rising, funds necessary to pay for certain operations would be released incrementally and proportionally to these 3 variables, in order not to hurt the momentum. Moreover, the 3% redistribution of other trades would provide this wallet with more funds without emptying the core initial amount. This allows the team to withdraw the necessary funds in a sustainable manner without burning the budget.
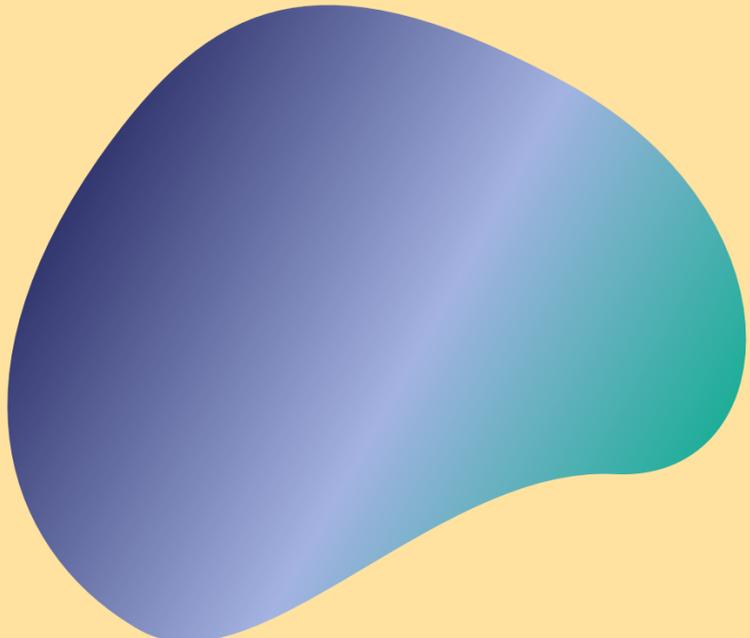

Charity funding

Charities will be organized by unlocking funds from the marketing wallet and raising these funds on a regular and periodical basis. Since we are a 100% community-driven project, there will also be a crowdfunding wallet so that every holder can contribute to the amount they can afford.
All expenses are readily available on BscScan with details being shown in public on our announcement channels.

NOTE: The team has burnt an additional 3 Trillion $HUNGRY to the dead address, decided by a community poll vote.There will be no future manual burns from the marketing wallet unless marketing conditions require and or hungry Bear is organically self sustaining.
This is not to be confused with the tokens that burn automatically from every transaction.

Presale Launch

On April 12th 2021, Hungry Bear organised a presale through dxSale:

https://dxsale.app/app/pages/defipresale?saleID=865&chain=BSC

200T $HUNGRY tokens were reserved for this presale, with a Soft cap of 100BNB and a Hard cap of 350BNB.

Fair presale

During the presale, 1BNB would give 574,100,000,000 HUNGRY compared to 500,000,000,000 HUNGRY at launch.
This small difference would deter day traders from selling right after thanks to the 8% transaction fee.
With a minimum of 0.1BNB and a maximum contribution of 4BNB per person, we ensured that everyone could purchase equitably according to their budget.
The presale link was given to the community a few seconds before it was completed within 30 seconds, thus being a real success and launching on Pancake Swap shortly after.
The team could not purchase their own tokens at presale and therefore had no other interest than to provide a fair preferential launch to the community.
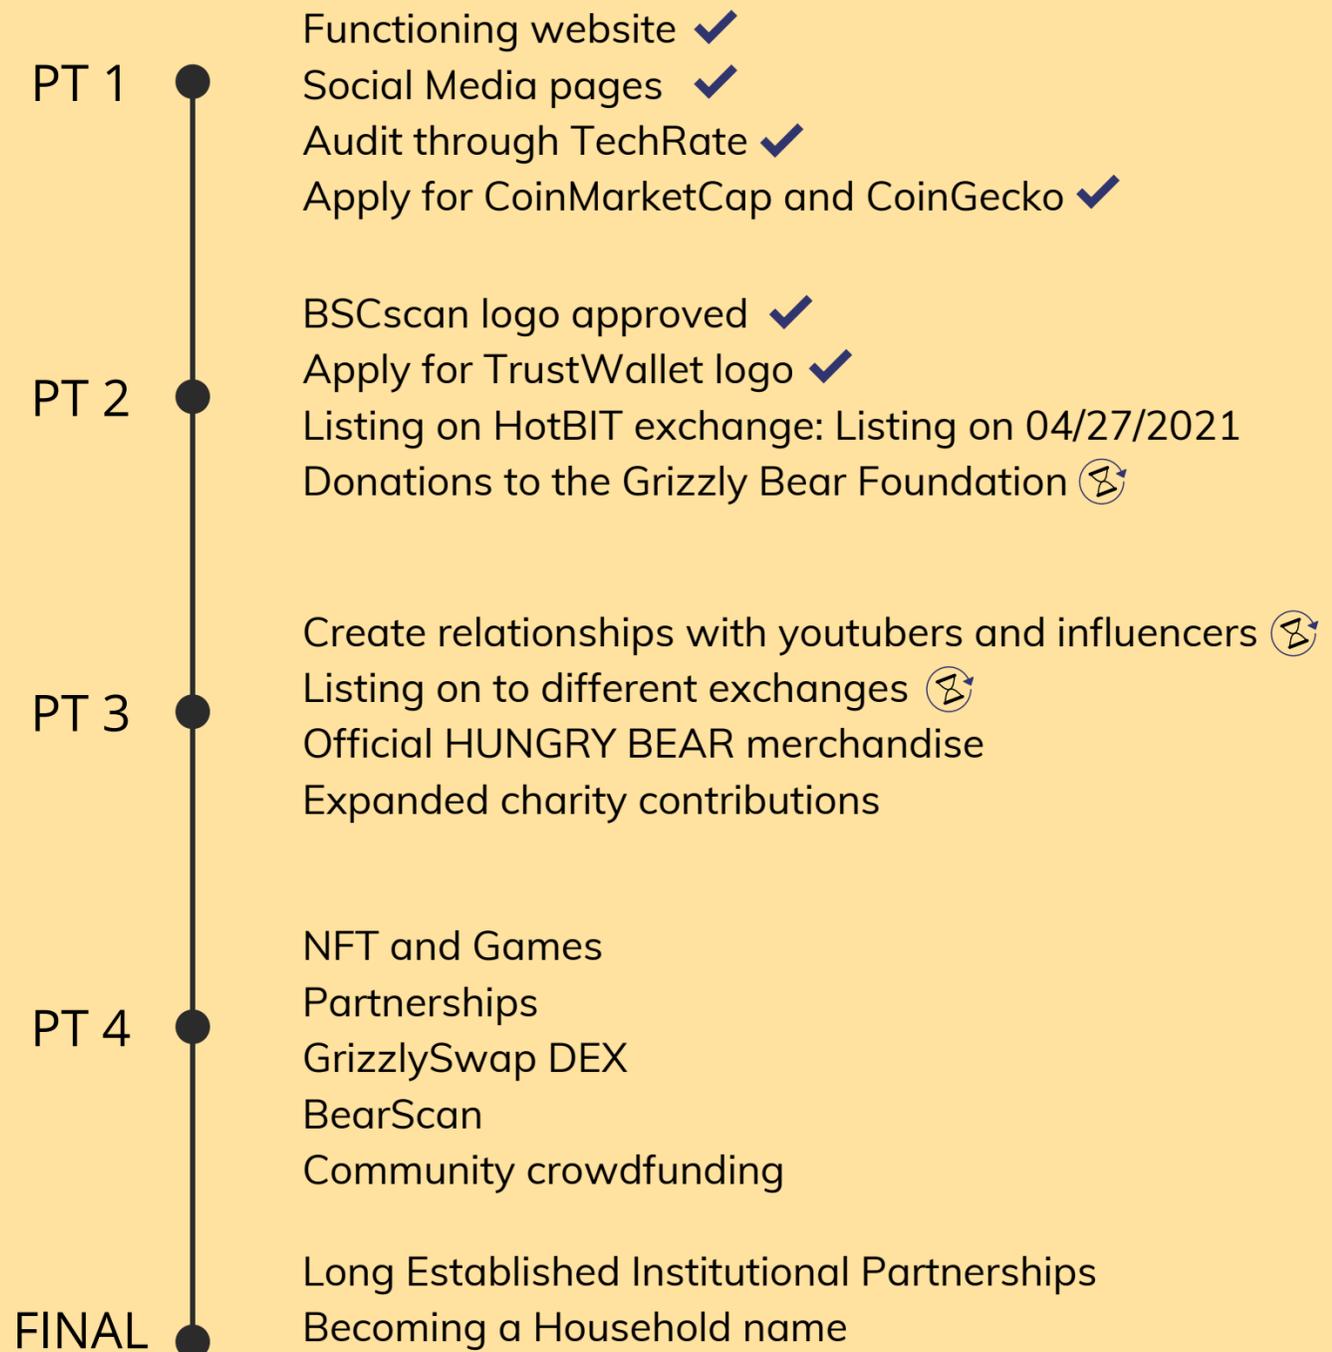

Liquidity lock

YOUR FUNDS ARE SAFU

On April 12th 2021, 10% of the total supply of $HUNGRY tokens were locked through DxSale:

https://dxsale.app/app/pages/dxlockview?id=865&add=0&type=lpdefi&chain=BSC

More tokens will be locked as the project grows and is self-sustaining.

ROADMAP

PUSHING INNOVATION FORWARDS

PT 1
Functioning website ✔
Social Media pages ✔
Audit through TechRate ✔
Apply for CoinMarketCap and CoinGecko ✔

PT 2
BSCscan logo approved ✔
Apply for TrustWallet logo ✔
Listing on HotBIT exchange: Listing on 04/27/2021
Donations to the Grizzly Bear Foundation 🐻

PT 3
Create relationships with youtubers and influencers 🐻
Listing on to different exchanges 🐻
Official HUNGRY BEAR merchandise
Expanded charity contributions

PT 4
NFT and Games
Partnerships
GrizzlySwap DEX
BearScan
Community crowdfunding

FINAL
Long Established Institutional Partnerships
Becoming a Household name

HUNGRYBEAR | 2021

LEGEND

✔ Completed   🐻 In Progress

HOW WE WILL DELIVER

Solving world hunger as well as preserving Grizzly bears is not an easy task. That is why we have established a partnership with the Grizzly Bear Foundation as well as liaising with childrens hospital, food shelters etc. to get things done as soon as possible. In order to keep these donations as sustainable and consistent as possible, Hungry Bear needs to reach a certain level of stability.

More Strategic Stakeholders

To reach a positive and stable price growth, which will in return attract even more investors. Partnering with Influencers and pushing a large-scale marketing strategy.

Deploying to other Markets

New exchanges as well as locations, eg. Chinese, Japanese, Russian and Turkish etc. in order to facilitate the adoption of our token.

Consolidating the partnerships

Made possible by multiplying the awareness and marketing campaigns
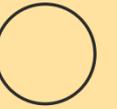

Community Strengthening

Dynamically organize community events and AMAs to provide an horizontal and transparent communication as well as reinforcing the Hungry Bear culture.

Tech Innovation

Building more solutions around Hungry Bear, with market-disruptive and problem-solving attributes

GRIZZLYSWAP

GrizzlySwap is a proposed prototype of HungryBear's next level Decentralised-Exchange (DEX) based on an automated liquidity protocol, providing our users with a clean and intuitive experience when swapping their tokens.
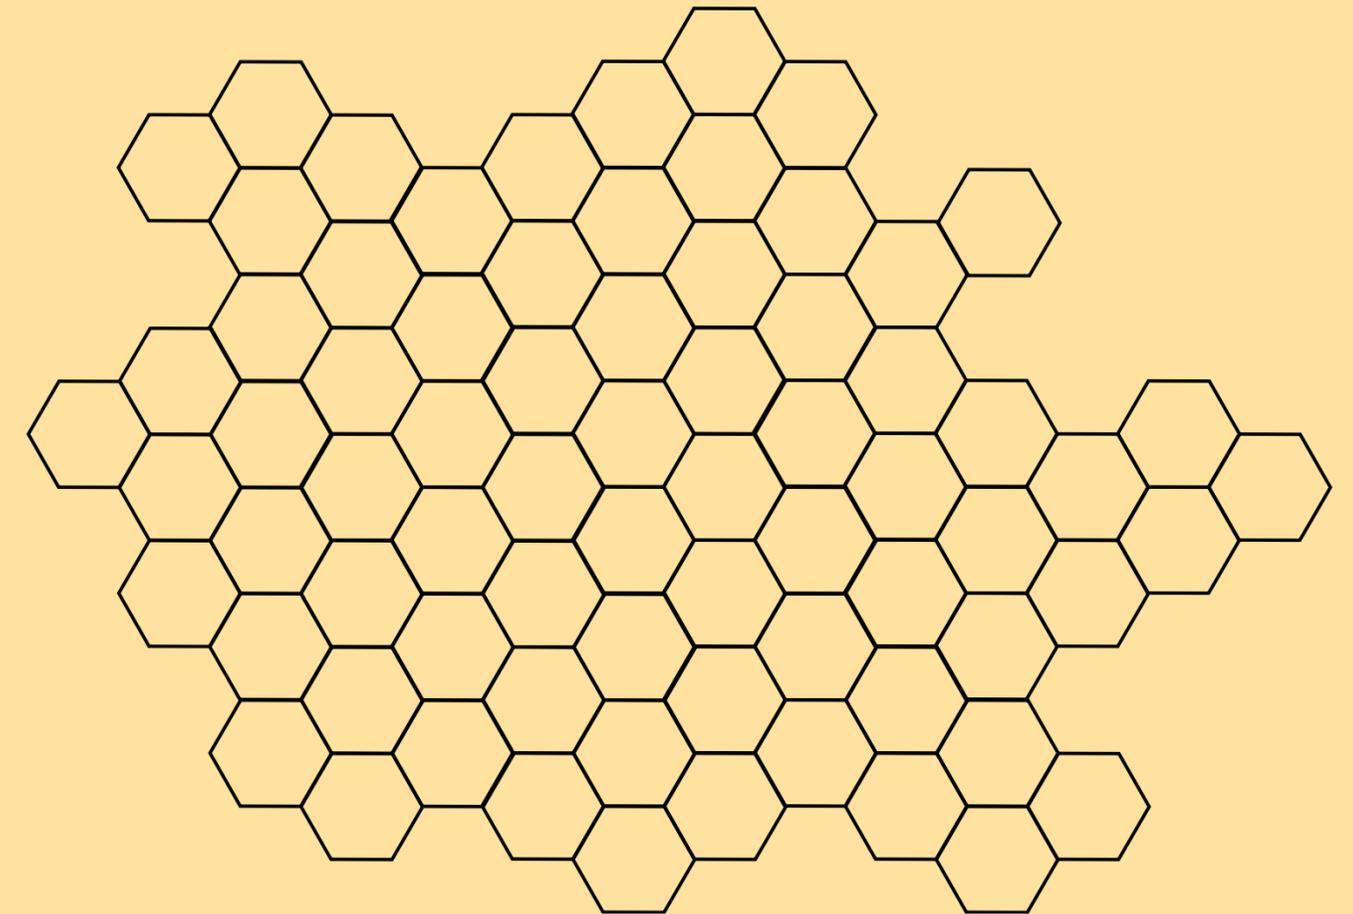

Why launching a DEX?

Having full control over the destiny of our project is essential. It eliminates the need to depend on third-parties, therefore prioritizing decentralization, security, and trust.

Grizzlyswap would also attract more and more token projects. Therefore securing a long-lasting partnership and a bright future for Hungry Bear.

GrizzlySwap's core liquidity concept

Each pair manages a liquidity pool composed of reserves of two BEP-20 tokens. Anyone can contribute to these pools and therefore become a Liquidity provider by depositing an equivalent value of each token in a given pair in return for Honey Liquidity Provider tokens (Honey LP shares). These tokens track LP shares on a pro rata basis of the total reserves and can be exchanged for the corresponding pair asset at any time.

GRIZZLYSWAP KEY FUNCTIONALITIES

- Staking pools rewarding traders even more by receiving residual income in BNB.

- Built-in liquidity locking option

- Anti-dumping technology that is embedded into every pair that can temporarily set sell limits to stabilize trading and minimize price manipulation.

- Front running bot protection

When GrizzlySwap?

Currently, GrizzlySwap is still being designed, with more and more partnerships being done and more options being weighted. All updates regarding the advancements of the DEX will be made public on our announcement channels.

BEARSCAN

NEXT-LEVEL CHART VISUALIZER

BearScan is part of Hungry Bear's project of creating a chart viewer, allowing people to view every BSC token's chart and Buys/Sells in real time

BearScan Core Concepts

Clean and Intuitive UX

Providing a clear experience for our users is our priority as well as transparent information with all core functionalities free. There will be no hidden fees for the premium version.

Added Value

Get the $USD or BNB value of the tokens by connecting your wallet.

Providing an efficient and professional service for other tokens wanting to partner up.

Diversification

Obtaining a new stream of income to fund our charities by displaying token advertisements.

When BearScan?

The core team is currently liaising with more developers in order to build the platform. There is currently no ETA. All advancements will be made publicly available to anyone.
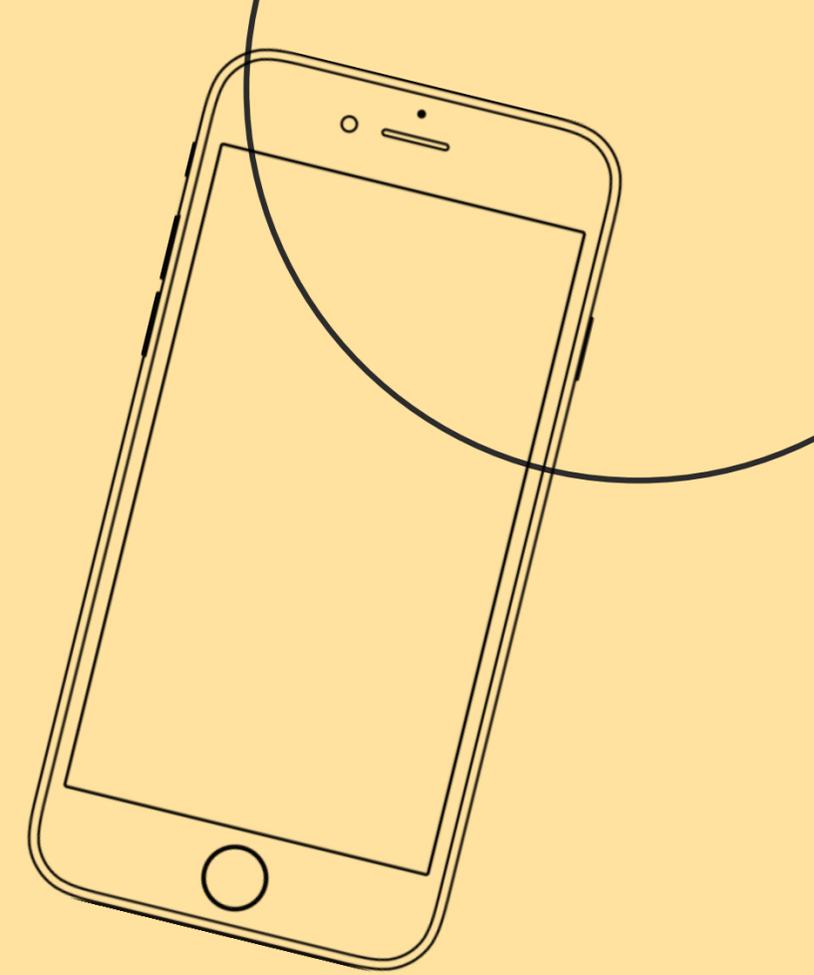

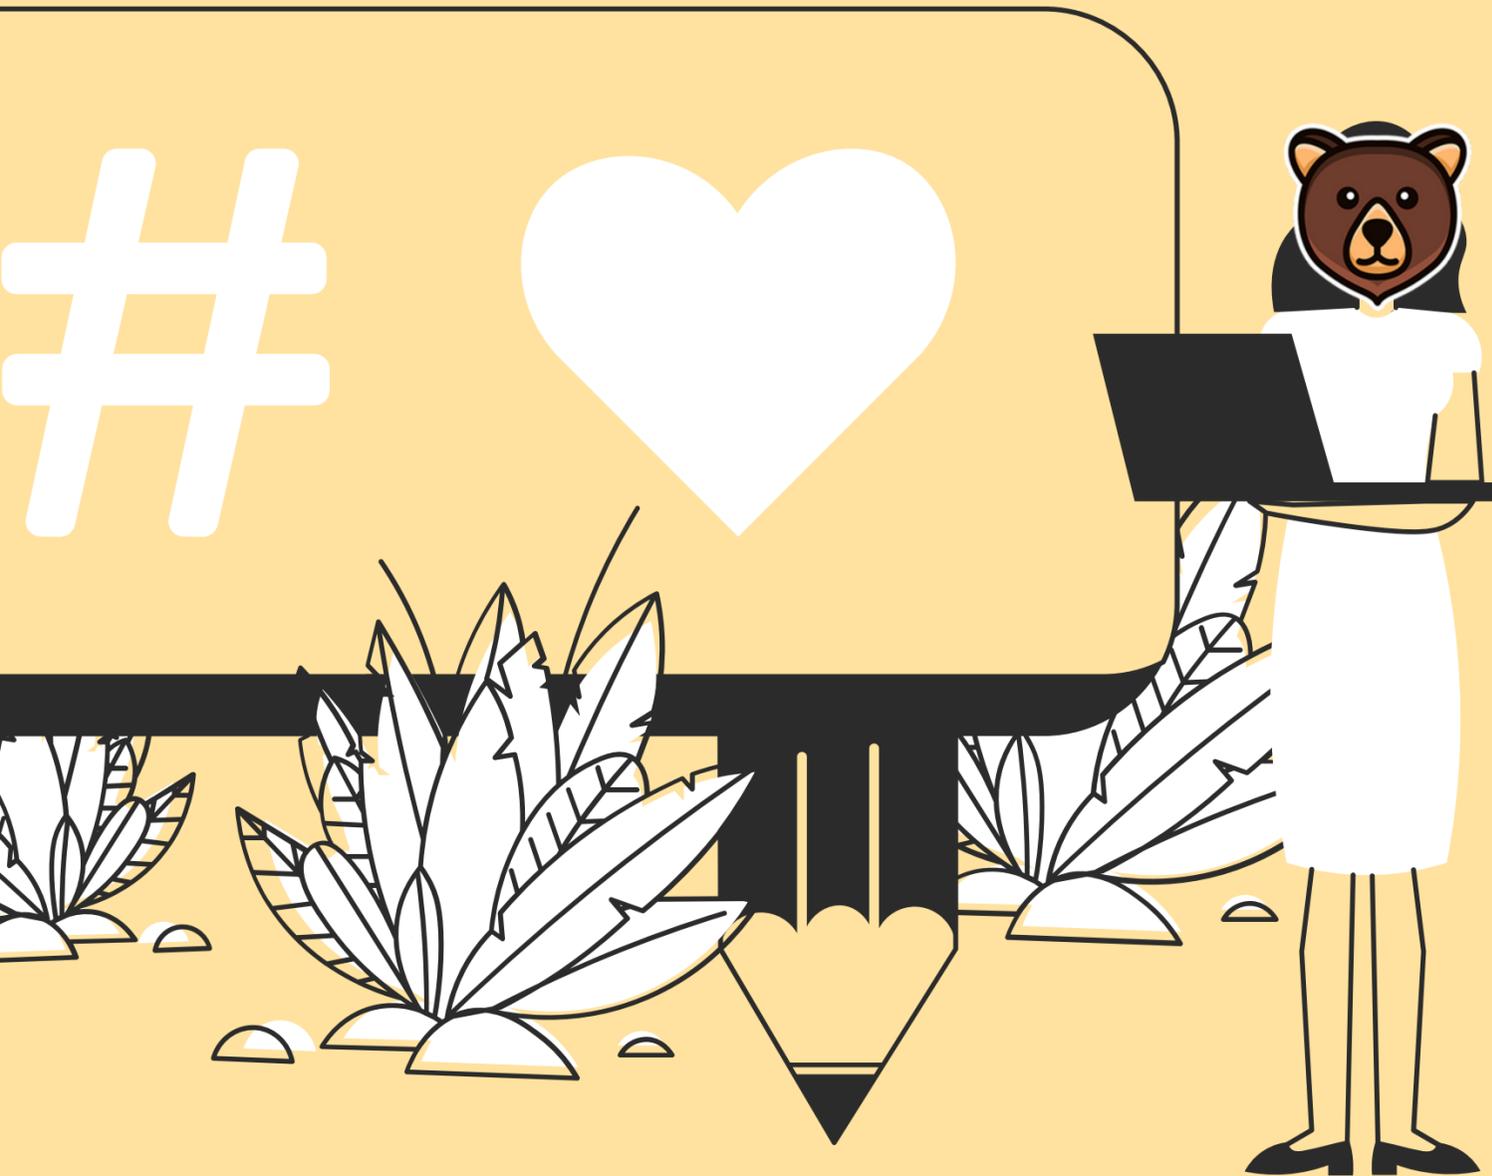

MORE IMPROVEMENTS

Hungry Bear iOS game

Because it's not always about serious work, it should also be fun! Stay tuned for more information regarding the iOS game. The bear is far from hibernating!

More and more solutions will be built around the project on a roll. Which gives our current and future investors enough events to look forward to. Hungry Bear's reputation will be unprecedented, as we will raise the first truly community-driven project. We will deliver on a consistent and stable manner.
